PROFILE SUMMARY

Computer Science undergraduate (B.Tech, 2027) focused on Full Stack Web Development with the MERN stack and strong problem-solving skills through Data Structures & Algorithms. Built and deployed full-stack and hardware-based projects, and led teams of 10+ volunteers to run technical events for 200+ participants. Seeking Frontend, Backend or Full Stack Developer roles.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, JavaScript (ES6+)

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend & Database: Node.js, Express.js, MongoDB, REST APIs

Tools & Platforms: Git, GitHub, VS Code, Arduino

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

Medicare – Doctor Appointment Application

React.js, Node.js, Express.js, MongoDB, Tailwind CSS

[Live Demo](#) | [GitHub](#)

- Built a full-stack healthcare platform for online doctor appointment booking and management with a responsive React.js + Tailwind CSS interface.
- Implemented secure authentication, doctor scheduling, appointment management and an admin dashboard.
- Designed REST APIs with Express.js and structured MongoDB collections for smooth appointment workflows.

RideIt – Bike Rental & Booking Platform

React, TypeScript, Node.js, Express.js, MongoDB, Tailwind CSS, Razorpay

[Live Demo](#) | [GitHub](#)

- Built a full-stack bike rental platform where travelers search bikes by city, category, price, brand and fuel type, and book online or pay cash at pickup, with a user dashboard and a full admin panel.
- Implemented secure authentication with JWT (access + refresh tokens in httpOnly cookies), email and phone OTP verification, and a document verification flow (ID, license, selfie) with admin approval before booking.
- Prevented double-booking using server-side availability checks inside MongoDB transactions, and calculated pricing (rental, taxes, discounts, deposit) on the server instead of trusting client values.
- Integrated Razorpay payments with server-side signature verification and refunds; secured the API with bcrypt, rate limiting, Helmet, and input sanitization.

Sensor-Based Smart Glasses for Visually Impaired

Arduino, Ultrasonic Sensors

Top 3 – College Innovation Competition

- Designed wearable glasses with ultrasonic sensors for obstacle detection and navigation support.
- Programmed an Arduino microcontroller to deliver real-time obstacle alerts within a 10-meter range.

PROBLEM SOLVING

- Solved **400+** DSA problems using C++, covering arrays, strings, recursion, linked lists, stacks & queues, trees, graphs and dynamic programming.
- Strong focus on writing optimized solutions, analyzing time and space complexity, and applying DSA concepts in real projects.

LEADERSHIP & ACHIEVEMENTS

- Earned **IIT Bombay certifications in C, Java and Python**, covering programming fundamentals and problem solving.
- Successfully completed the **160-day coding challenge** on gfg with daily consistency.
- Secured **Top 3** in a college innovation competition for the Smart Glasses project.
- Organized technical events (*Blind Coding, TechnoMax, Treasure Hunt*); led **10+ volunteers** and coordinated **200+ student participants**.
- Managed event promotion, poster design, registrations and social media campaigns.

EDUCATION

Roorkee Institute of Technology

Bachelor of Technology in Computer Science & Engineering

Maa Durga Ji Senior Secondary Vidyalaya

Senior Secondary (CBSE)

Expected 2027

Roorkee, India
2023

Uttar Pradesh, India
